Resume Summary

Computer Engineering student with hands-on research experience in embedded systems and electrochemistry. Skilled in Python, SQL, and circuit analysis, with practical work on prototype testing and data capture for battery materials and soil moisture communications. Strong problem-solving and attention to detail, seeking an electrical/software engineering internship in mission-critical environments.

Educational History

Brigham Young University

Aug 2022 - Now

Computer Engineering Major and Computer Science, Japanese, and Legal Studies Minors

- **GPA:** 3.92 GPA (Academic Junior)

Sep 2018 - Jun 2022

Roseburg High School

General Studies

- **GPA:** 4.0 Weighted GPA
- **Achievements:** Valedictorian (Ranked 1 out of 397 students), Three time AP Scholar

Work Experience

Brigham Young University

Research Assistant

Aug 2022 - Aug 2023

- Assisted graduate students in investigating conversion of halloysite into silicon for lithium-ion batteries using Python scripts and embedded systems techniques
- Conducted DSC and electrochemistry experiments to characterize material properties using lab equipment such as potentiostats

Research Assistant

Aug 2025 - Present

- Developed local farm communications system between soil moisture sensors and antenna using Python and integrated microcontrollers
- Published researcher; maintained code repositories using Git for project version control

Church of Jesus Christ of Latter-Day Saints - Japan Tokyo North Mission

Aug 2023 - Aug 2025

Full-time Volunteer Missionary

- Learned the Japanese language and organized service projects across communities in the Greater Tokyo Metropolitan area
- Taught people about Jesus Christ and organized service opportunities
- Worked on leading teams from sizes of ten to thirty, setting goals and action plans in six-week periods.

Missionary Training Center

In-Field Mentor

- Teaching native Japanese missionaries • Organizing skill training and consultations on mental and physical health • Helped connect over 100 missionaries across Asia to resources on how to improve their skills

Projects

AI Day Journal

- Integrated OpenAI API into a web-based app that asks conversation questions to gauge emotional levels. Suggests resources provided by Brigham Young University at the bottom as the conversation continues, and afterwards stores the data into an easy-to-read journal entry. Also stores data that is calculated into an emotional health bar broken up into five categories.
- **Skills:** Machine Learning, Web/Mobile Development, Micro-services architecture

Interactive Doorbell

- Doorbell built off a Raspberry Pi nano. User interface allows for image to be taken when bell is rung, sending said image by text to the phones of all roommates who opt into the list. Over **300+ interactions**, with room for further development.

SKILLS

- **Core Competencies:** Strong Work Ethic, Adaptability, Problem Solving, Technical Knowledge
- **Technical Skills:** Embedded Systems, Circuit Design, PCB Design Tools, Microcontrollers, Microsoft Office, Lab Equipment Usage
- **Software & Tools:** Programming C/C++, Programming Python, Git/version Control, Java, Scala, SQL
- **Languages:** Japanese (Fluent), Spanish (Intermediate)
